Performance Test: Snowflake Template

SkillWallet | Data Analytics with Tableau Capstone

Project detail	Confirmed information
Documentation date	27 October 2026
Final submission date	28 October 2026
Team ID	LMP-EV-2026
Project name	Electric Vehicle Market Performance & Insights
Tableau workbook	Electric Vehicle Market & Technology Analysis
Project owner	Yuvraj Shrivastava
Enrollment number	EN25CS3011105
Institution	Medicaps University, Indore
Contribution	Individual project completed by Yuvraj Shrivastava

Scope clarification

The project owner confirmed that Snowflake was not used. The uploaded template is retained for transparency, but its Snowflake-specific performance parameters cannot be reported as completed. The actual project is CSV-based and analyzed in Tableau Public.

CSV source-file inspection

CSV inspection item	Verified value
Uploaded file	ev_market_train(1).csv
Rows / records	200,000
Columns	37
File size	46,478,548 bytes (44.33 MiB)
Null cells in uploaded CSV	18,996
Rows containing at least one null	18,251
Exact duplicate rows	1
Repeated vehicle_id values	1
Test CSV usage	Not connected to Tableau workbook, per project owner

Snowflake template responses

S.No.	Parameter	Updated screenshot / values
1.	Data Rendered	NOT APPLICABLE to Snowflake. No Snowflake tables were loaded. Actual project source is ev_market_train(1).csv, inspected as 200,000 rows × 37 columns, 44.33 MiB.

S.No.	Parameter	Updated screenshot / values
2.	Data Preprocessing & Quality	NOT APPLICABLE to Snowflake. CSV source inspection found 18,996 null cells, 1 exact duplicate row and 1 repeated vehicle_id. Owner reports null/duplicate removal and data-type correction during cleaning; cleaned output evidence is still needed.
3.	New Fields Created	No Snowflake fields were created. Tableau uses aggregations/calculations: SUM(annual_sales_units), COUNTD(vehicle_id), AVG(range_km), AVG(price_usd), AVG(customer_rating), MEDIAN(range_km) and Percent of Total.
4.	Filter Efficiency Test	NOT APPLICABLE to Snowflake query testing. Tableau filters are model_year, category, battery_type and manufacturing_country. Filter response-time benchmarks were not measured.
5.	Dashboard & Visualization Testing	Snowflake visuals: 0. Actual Tableau deliverables: 9 worksheets and 1 interactive dashboard.
6.	Query History	NOT APPLICABLE. No Snowflake query history or Snowflake query execution time exists for this project.

Data quality clarification

Important data-quality finding: direct inspection of the uploaded CSV shows 18,996 null cells across 18,251 rows, 1 exact duplicate row, and 1 repeated vehicle_id value. This means the uploaded file itself is not a fully cleaned export. You previously confirmed that nulls and duplicates were removed and data types corrected during preparation. The documents distinguish the supplied source-file inspection from the reported cleaning step; a cleaned final CSV or Tableau cleaning screenshot is needed to verify the post-cleaning result. No cleaned row count is invented.

Submission note

If SkillWallet requires a genuine Snowflake implementation, this project does not meet that Snowflake-specific requirement. Submit this form only if the evaluator accepts an N/A explanation or has provided it as a generic template.
