PROBLEM–SOLUTION FIT CANVAS

Project Design Phase-I | Electric Vehicle Market Performance & Insights

27 October 2026 | Team ID: LMP-EV-2026 | Yuvraj Shrivastava | EN25CS3011105

Date	27 October 2026
Team ID	LMP-EV-2026
Project Name	Electric Vehicle Market Performance & Insights
Project Lead / Sole Contributor	Yuvraj Shrivastava (EN25CS3011105), Medicaps University
Maximum Marks	2 Marks

Purpose: define the target user, job/problem, existing behavior and alternatives, constraints, root causes, triggers, emotions, channels and proposed solution. Emily Johnson is a hypothetical EV Market Strategy Director persona, not an interviewed customer.

1. CUSTOMER SEGMENT(S)
Primary persona: Emily Johnson, a hypothetical EV Market Strategy Director. Other intended users: EV market analysts, strategy teams, product planners and decision-makers.

6. CUSTOMER CONSTRAINTS
Analysis is limited to the supplied dataset and its coverage/quality. Users need internet and a browser; Tableau Public availability is required. Measures and units need interpretation. The dashboard is descriptive, not predictive.

5. AVAILABLE SOLUTIONS
Alternatives include raw CSV/Excel analysis, static reports, individual charts and other market dashboards. They can require manual consolidation or lack linked filters. This project provides one public interactive dashboard.

2. JOBS-TO-BE-DONE / PROBLEMS
Explore annual EV sales by category/manufacturer; compare battery chemistry and median range; examine price versus range; review customer-rating measures; compare manufacturing-country patterns.

9. PROBLEM ROOT CAUSE
Market measures span many dimensions and can be hard to compare in separate files or static charts. Users need a consolidated view. Conclusions remain dependent on the supplied dataset.

7. BEHAVIOUR
The intended user opens the website, reviews KPIs, filters by model year/category/battery type/country, selects charts to cross-filter and inspects marks or labels.

3. TRIGGERS
Market reviews, annual planning, product/segment comparisons, battery-technology evaluation, competitor review or questions about price, range, sales and manufacturing geography.

10. YOUR SOLUTION
A Tableau Public dashboard embedded in a GitHub Pages website. It has nine worksheets, executive KPIs, global filters and chart-selection interactions. Story Point 1 is completed; Points 2–4 are planned.

8. CHANNELS OF BEHAVIOUR
ONLINE: GitHub Pages website, embedded Tableau Public dashboard and direct workbook link.
OFFLINE: project demonstration, classroom review or strategy discussion. These are proposed channels, not evidence of interviews.

4. EMOTIONS: BEFORE / AFTER
BEFORE: information may feel fragmented or time-consuming to compare. AFTER: the user can explore a structured visual summary and form better-informed questions. This is expected, not survey-measured.

FIT STATEMENT: The solution brings the supplied EV dataset's market, technology and geography measures into one interactive Tableau dashboard and makes it accessible through a project website. Fit is demonstrated as a functional deliverable; no external customer interviews, usability study or adoption metrics have been supplied.
OWNERSHIP: Created independently by Yuvraj Shrivastava (EN25CS3011105), Medicaps University. Emily Johnson is a hypothetical persona.
