4. EMOTIONS: BEFORE / AFTER

SkillWallet | Data Analytics with Tableau Capstone

Project detail	Confirmed information
Documentation date	27 October 2026
Final submission date	28 October 2026
Project name	Electric Vehicle Market Performance & Insights
Tableau workbook	Electric Vehicle Market & Technology Analysis
Team ID	LMP-EV-2026
Project owner	Yuvraj Shrivastava
Enrollment number	EN25CS3011105
Institution	Medicaps University, Indore
Contribution	Individual project completed by Yuvraj Shrivastava

Implementation scope and template clarification

The uploaded template is titled “Snowflake Project – Data Engineering & SQL Solution” and requests Snowflake database, warehouse, tables, views and SQL evidence. Those items do not match the confirmed implementation of this project. The project was completed using CSV data and Tableau Public, not Snowflake or Streamlit. This report therefore records those Snowflake-specific fields as Not Applicable rather than inventing database objects or SQL scripts.

Solution summary

Template field	Accurate project response
Project / Repository Link	https://en25cs3011105-spec.github.io/Electric-Vehicle-Market-Performance-and-Insights/
Data Source(s) Link	Supplied EV market training CSV (ev_market_train.csv). The test CSV was a supplied resource only and was not connected to the Tableau workbook.
Database	Not applicable. No Snowflake database was used.
Warehouse	Not applicable. No Snowflake virtual warehouse was used.
Tables / Views Created	No Snowflake tables or views. Tableau worksheets and dashboard were created using the CSV data source.
Key Transformations / Calculations	Removed nulls and duplicate records; corrected data types. Tableau calculations include SUM(annual_sales_units), COUNTD(vehicle_id), AVG(range_km), AVG(price_usd), AVG(customer_rating), MEDIAN(range_km) and Percent of Total.
KPIs Created	Annual sales units, distinct vehicle count, average range, average price and average customer rating.
Key Insights	Two-Wheeler Scooter leads category sales in the supplied screenshot; Sodium-Ion has the highest displayed median range (341 km); NMC has the largest displayed battery share (33.80%).

Technology and deliverables

• **Data source:** CSV training dataset supplied for the EV market project.

• **Analysis platform:** Tableau Public.

• **Published workbook:** https://public.tableau.com/views/ElectricVechileMarketTechnologyAnalysis/ElectricVehicleMarketPerformanceInsights?:showVizHome=no

• **Website:** https://en25cs3011105-spec.github.io/Electric-Vehicle-Market-Performance-and-Insights/

• **Visual deliverables:** Nine Tableau worksheets, an interactive dashboard and a Tableau Story with only Story Point 1 completed.

• **Individual contribution:** The project is documented as completed by Yuvraj Shrivastava alone, with no other contributor.

Snowflake quality checklist

Criteria	Status	Explanation
Data loaded into Snowflake	No / N.A.	The project uses a CSV source in Tableau, not Snowflake.
Snowflake data cleaned and transformed	No / N.A.	Cleaning was performed on the CSV data; no Snowflake transformations are claimed.
Snowflake tables, views and relationships	No / N.A.	No Snowflake tables or views were created.
SQL logic and KPIs in Snowflake	No / N.A.	KPIs and aggregations were created in Tableau.
Snowflake output validation	No / N.A.	No Snowflake output exists to validate.
Tableau project organized and published	Yes, based on supplied project details	Workbook and project website are published; Story is only partially complete.

Additional notes

If SkillWallet expects a Snowflake implementation specifically, this Tableau-only project may not satisfy that separate requirement. Confirm with the evaluator before submitting this adapted document.
